REPORT OF CHAIRMAN AND EXECUTIVE DIRECTOR

To the average person a hospital appears to change very slowly. Even when building programs add to it, the main configuration of the complex is relatively the same for many years. But a hospital is not primarily a physical structure; rather it is made up of people and programs. These are continually changing and developing at an increasing pace. Some changes are continuations of those which started years before; others are completed within a single year.

Nineteen seventy-one was a difficult and significant year for the University Hospital. Some of the issues referred to in previous annual reports are still with us and we are facing new problems as well. A few of these are highlighted in this report.

CENTENNIAL HOSPITAL PROJECT

This Project is probably the most important single development in the University Hospital since its origin in 1914. On completion the project will create a resource at the University of Alberta Health Sciences Centre providing facilities for clinical departments which have developed over the past two decades in cramped space unsuited to their purpose. Space will be available to provide health care on an ambulatory basis rather than in the traditional in-patient manner. It will also provide, for the first time, a reasonable clinical base for medical education and will upgrade some obsolete facilities in the hospital to a standard commensurate with the 1970's.

By September, 1971, after six years of work by hundreds of people, planning for the project and site preparation were completed. Construction was about to begin when a "hold" was ordered because of the exigencies of the provincial economy and to allow our new Government an opportunity to evaluate its priorities. As of year end the freeze on construction was still in force, resulting in major concern to the Board and Medical Staff of the Hospital and to the Faculty of Medicine as the pressures on our inadequate facilities grow.

GLOBAL BUDGET

Nineteen seventy-one was the second year in which the hospital operated under a global budget. While the actual amount of budgetary approval caused some concern at the beginning of the year, the fact that the Board was able to allocate its resources on its own authority, provided that it did not commit itself to programs with on-going costs, enabled us to complete the year successfully from a financial point of view. During the past six years the rate of increase in our operating budget, inclusive of inflation, volume increases and new programs, has reduced from a high of over 18 per cent to under 10 per cent.

ABERHART HOSPITAL

Effective January 1, 1971, the University Hospital Board became responsible for the operation of the Aberhart Hospital — a 250 bed institution which had previously been limited to the care of patients with tuberculosis, and which had an occupancy of less than 50 per cent. While committing itself to continue this responsibility, the Board has developed proposals to use the hospital for other purposes as well, including services for long-term poliomyelitis, chronic respiratory disease, mental health and extended care. To enable these services to be provided, substantial renovations are required.

With the amalgamation of the two institutions, the laundry services were centralized and the Aberhart laundry was closed. The result has been an improved laundry service at a

considerable reduction in cost.

From a financial point of view our first year's experience of the amalgamation has been very satisfactory. The actual operating budget of the Aberhart Hospital in 1971 was considerably below the approved budget for 1970. We are looking forward in 1972 to the implementation of the proposed new programs.

LABORATORY SERVICES

Pathology and microbiology laboratory services on the University of Alberta campus have developed in a relatively unplanned manner. Three distinct medical laboratory authorities exist on campus — the University Hospital, the Faculty of Medicine, and the Provincial Laboratory of Public Health. After thorough review by all parties, recommendations have been submitted to the Alberta Hospital Services Commission proposing a rationalization of these resources to provide a unified hospital laboratory service. It is hoped that these recommendations will be approved in the near future.

THERAPEUTIC ABORTIONS

With changes in law relating to therapeutic abortions, the number of these procedures carried out in the hospital is increasing very rapidly. While the total number of procedures carried out is not as great as in some other metropolitan hospitals, nevertheless the additional load has created major problems in our Department of Obstetrics and Gynaecology and in nursing service.

BOARD AND SENIOR STAFF CHANGES

Mr. T. K. Campbell was appointed to the Board of Governors on January 1, 1971, and Mr. S. A. Milner resigned effective December 31, 1971.

Dr. J. K. Martin resigned as Chairman of the Department of Paediatrics and was replaced by Dr. E. E. McCoy.

Miss Ruth Thompson, Director of the School of Nursing, retired and Mr. H. Chalmers was appointed as the Director.

The Board and Administration of the University of Alberta Hospital wish to express their appreciation to our staff, medical staff and volunteers, without whose hard work and cooperation the continued high standard of service in the hospital could not have been achieved.

For those who are interested in detailed information on the hospital, copies of the Divisional and Departmental Reports are available on request from the Executive Director's office.

Gordon K. Wynn
